

Put that down! You don't know where it's been.

But you could. Electronic tracking is just one of the startling innovations developed by QinetiQ for our Managed Decontamination Service. A tiny microchip on every surgical instrument tells you its entire history in seconds. You can schedule operations with confidence and prevent postponements. Every time.

Like you, we put patients' safety before profit and understand the critical importance of proper decontamination. QinetiQ's innovative, robust, high quality decontamination system both protects patients against CJD and Hepatitis B and ensures compliance with all EU and MDD regulations.

Working in partnership with you and key industry suppliers

we can provide a total end-to-end managed service. We can even set up a Decontamination Supercentre in your own hospital.

QinetiQ is a major managed service supplier. Our 25-year, £5.6 billion government service contract for managing health and safety bears witness to that.

Why not see how valuable QinetiQ's Managed Decontamination Services can be – to you and the patients in your care.
